

# Bond Projects IN ACTION

## WELCOME TO THE NEW ADDITION AT AMANDA MOORE ELEMENTARY!

We are so grateful to our voters for supporting our 2021 Facilities Bond and making these amazing updates to our schools possible. It is exciting to see the projects come to life from design to construction. Amanda Moore students are now experiencing a transformation in their learning thanks to these new spaces!

Be sure and visit these classrooms before or after your conference tonight. Classes are expected to begin on Monday, December 2.

### STEM Classroom

**Our STEM space is an incredible spot to foster curiosity, critical thinking, and hands-on learning. Students will work on collaborative projects that encourage teamwork. From building structures to designing simple machines, all grades will learn the value of collaboration, which fosters problem-making skills.**

### Art Classroom

Amanda Moore students can make the most of the new art room in various ways. Comfortable seating allows for longer and more focused sessions. Also, the room has been designed to be versatile so it can accommodate different activities and class sizes.

### Music Classroom

The new music room is an incredible space for elementary students to explore and cultivate their musical talents. The room has been designed with good acoustics to help students understand sound dynamics. Having the room away from the general education setting will prevent disturbance to other classes.

**Thank you for your support!**
